## The Monolux Therapy System – Diagnostics and Therapy in one

The uniqueness with the Monolux Therapy System is the simultaneous discovering, measuring, and treating of therapeutically significant reflex points on the body, which can immediately be treated with light, color, external vibration, and pulsating magnetic field in the frequency range of 2.5 to 25,000 Hz.

The Monolux Therapy gently affects the biological system of our body and can be applied from infants to the elderly - without restrictions.

## Monolux News

This newsletter provides tips for users as well as experiences with the Monolux Therapy from research and training. Simply sign up on our homepage for this free newsletter.

and magnetic field

## The Monolux Therapy System

The uniqueness with the Monolux Combi Pro is the simultaneous discovering, measuring, and treating of therapeutically significant reflex points. The versatile usage as well as proven therapy concepts of this, by Prof. Erst Schaack developed therapy system, are taught during specific training.

### Monolux Combi Pro Accessories:

① Hand electrode ② Combi Pen ③ Therapy Pen available in: red, blue, yellow-orange, green and violet ④ Magnetic head with light ⑤ Curved Therapy Stylus ⑥ Input and output cup ⑦ Test Honeycomb ⑧ Demodulator (Speaker) ⑨ Double probe  
Additional accessories on order form - Devices / Homepage / Shop.

## Applications

The application is diverse, from origin of pain via remote points on all acupuncture, micro- and reflexology systems:

- MEPs ( NPSO / Siener )
- Body and ear acupuncture, YNSA (Yamamoto New Scalp Acupuncture)
- Facial, foot and hand reflexology, ...
- Muscle relaxation in osteopathy, physiotherapy
- Suppression of scars
- Blood and lymph flow regulation
- Skin resistance measurement (BFD, EAD, Vega...)
- Drug tests
- Resonance Therapy with/without inversion
- Color Therpay, Hypnotherapy
- Wellness, cosmetics, ...

## Results

The effective results can easily be explained by the interaction of light, color, vibration, and magnetic field on the exact point or area.

The monochromatic light and the individual used color stimulate cell activity and positively influence energy production within the mitochondria. Various frequencies which are modulated by light can be "introduced" into the organism and a pulsating magnetic field supports the micro circulation.

The Monolux Combi Pro offers 9 treatment programs with proven frequency patterns for example sedation, toning, pain relief, lymph stimulation and the patient's own oscillation, as well as remedy information, proven frequency effects and music (through an MP3 player), can be fed and transferred to the body through light.

## Monolux Therapy

This contemporary therapy with light, color, vibration, and magnetic field is taught in one-day workshops.

The topics pain therapy and reflexology, diagnosis, and therapy concepts are designed for therapists; facial diagnosis as well as advice for the medicine cabinet can be interesting for beauticians and other users. The 8 modules can be individually booked. Detailed information can be found on our homepage.

## Monolux Pen

The user friendly Monolux Pen is available in different versions. It is a quick help with pain, in practice, while traveling, with children, and even animals.

The luminescent light diode will change its colors in 10 second intervals from red, green to blue. The color spectrum of the rainbow is created through various mixed colors with physiologically good and rich harmonic frequencies.

A small magnet generator also provides here a gently pulsating magnetic field which promotes lymphatic and blood circulation.

## Monolux Pen with round head

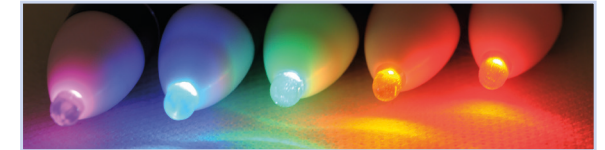

The Monolux Pen with round head is ideal for use on pain points and to massage facial areas, reflexology, meridian, and scars.

## Monolux Pen rock crystal top

The version with crystal top is particularly suitable for acupuncture, color puncture, since points are very precise and can be treated selectively, as well as chakra treatment and relaxation without skin contact.

## Monolux Colorset

The color therapy set includes 5 Monolux Pens which radiate monochrome light with a slightly stronger intensity. It is specifically developed for color therapy and is available with round head or crystal top.

## Monolux Pen plus point detector

The Monolux Pen plus also allows you to locate points with reduced skin resistance.
